

BSC Training Course: Introduction to Heterogeneous Memory Usage

Objectives

The objective of this course is to learn how to use systems with more than one memory subsystem. We will see the different options on using systems equipped with Intel's Optane Persistent Memory technology, but also looking forward to upcoming systems with HBM and CXL memories.

Requirements

Basic skills in C programming.

Learning Outcomes

The students who finish this course will be able to leverage applications using multiple memory subsystems.

Academic Staff

Convener: Antonio Peña, Computer Sciences Senior Researcher, Accelerators and Communications for High Performance Computing, BSC

Further information

BSC Training Courses do not charge fees.

Your laptop does not need a particular GPU. An ssh client is required to connect to our GPU-equipped servers.

You can send us an e mail to education@bsc.es for further details about MSc, PhD, Post Doc studies, exchanges and collaboration in education and training with BSC.
