Objectives

Objectives: VI-HPS Tuning Workshops are the major training vehicle where around 40 participants receive instruction and guidance to become familiar with VI-HPS programming tools suite. During the training, we will explain the functionality of each tool and how they can be used. We will also give them hands-on assistance on how to apply VI-HPS tools to their own parallel application codes, along with advice for potential corrections and optimizations.

Additionally, feedback to tools developers helps direct tools development to user needs, as well as improve tool documentation and ease of use.

For further information please check the [VI-HPS website](https://www.bsc.es)

Requirements

Prerequisites: Basic knowledge on parallel programming. Attendees have to bring an application that can use on the hands-on. They need to have the source code and install it in the BSC machine.

Learning Outcomes

Learning Outcomes:

- Understand common performance analysis and diagnosis techniques and how they can be employed in practice
- Make sense of the functionality of individual tools, and how to use them effectively
- Apply VI-HPS tools to their own parallel application codes
- Optimize their own codes thanks to the coaching of how to tune their measurement and analysis
Course Convener: Judit Gimenez, Tools Group Manager, Computer Sciences - Performance Tools, BSC
