PRACE Autumn School 2010

Objectives

To evangelise on the usage of HPC technologies in general and application development in particular. The event should aim to expand and intensify the existing ecosystem of scientists who use HPC technologies. To this end, the school should be attractive for a heterogeneous audience, covering lectures on topics ranging from basic concepts on programming frameworks to specialised tools and techniques for advanced users. In order to cope with an heterogeneous audience, the school should run parallel sessions.
