

PRACE Training Week

Objectives

The objective of this seminar is to carry out a hands on training on the use of the Paraver and Dimemas tools to analyze the performance of parallel applications.

Requirements

It will be highly desirable to have running version of the applications to be analized (which we think should preferably be PRACE benchmarks) on the machines where the tools have been installed (Marenostrum as well as Jugene and Huygens) and if possible to obtain some traces for small problem/machine sizes before attending the seminar (please contact Judit Gimenez (judit@bsc.es) for assitance).

Materials

Image not found or type unknown

You are expected to come with your own laptop either linux or windows where the open source paraver distribution from <http://www.bsc.es/paraver> can be installed.
