

[Inici](#) > An Open Benchmark Implementation for Multi-CPU Multi-GPU Pedestrian Detection in Automotive Systems

[An Open Benchmark Implementation for Multi-CPU Multi-GPU Pedestrian Detection in Automotive Systems](#)

URL: <http://ieeexplore.ieee.org/document/8203793/>

Authors: [Trompouki, Matina](#) / [Kosmidis, Leonidas](#) / [Navarro, Nacho](#)

Research Lines: [Application optimization for GPU acceleration](#) / [COTS multicore real-time systems](#) / [Data Placement for Heterogeneous Memory Systems](#) / [Message Passing Interface \(MPI\)](#)

Publication: 2017 IEEE/ACM International Conference on Computer-Aided Design (ICCAD)

Place Published: Irvine, California

Pagination: 305-312

Paraules clau: [ADAS software](#), [Advanced Driving Assistance Systems](#), [Automotive engineering](#), [automotive industry](#), [automotive processors](#), [automotive systems](#), [Benchmark testing](#), [benchmarking](#), [candidate platforms](#), [computational power](#), [Data structures](#), [driver information systems](#), [Feature extraction](#), [GPU implementation](#), [Graphics processing units](#), [image recognition](#), [Industries](#), [multi-CPU multi-GPU pedestrian detection](#), [multicore CPUs](#), [multiple GPUs](#), [multiprocessing systems](#), [multiprocessor system](#), [Nvidia GPUs](#), [Object detection](#), [open benchmark implementation](#), [open implementation](#), [parallel architectures](#), [pedestrian detection benchmark](#), [pedestrians](#), [programming models](#), [Resource management](#), [traffic engineering computing](#), [Viola-Jones image recognition algorithm](#)
