

Storage and Perfminer Seminars

In respect of the first seminar: description of hardware storage in the RES, typical maintenance tasks, monitoring tools and optimization. GPFS description commands, fees and multicluster version. Presentation of alternative hardware and software. Regarding the second seminar: description of function and application of Perfminer in order to collect, store and display data on system performance.

The RES (Spanish Supercomputing Network) coordinated by BSC organized the Technical Training Storage management in the RES and Function and application of Perfminer the last 14th and 15th September 2010 in Barcelona.
