Personalized Medicine Initiative
This research line encompasses the development of different strategies and approaches to improved personalized diagnosis of disease, as well as treatment selection for particular patients, based on their individual characteristics.

**Summary**

This research line encompasses the development of different strategies and approaches to improved personalized diagnosis of disease, as well as treatment selection for particular patients, based on their individual characteristics.

**Objectives**

- Organize the BSC resources for the analysis of large scale genomics and phenotypic data (including disease information from medical resources)
- Apply them in collaborations with clinicians
