

The Alya System - Large Scale Computational Mechanics

Overview:

The Alya System is the BSC simulation code for **multi-physics problems**, specifically designed to run efficiently in **supercomputers**.

In Alya, these two main features are complementary, which makes the code especially well-suited to simulate complex problem in different domains of Science and Technology.

Among the problems Alya can simulate are:

- Incompressible Flows
- Compressible Flows
- Non-linear Solid Mechanics
- Species transport equations
- Excitable Media
- Thermal Flows
- N-body collisions
- ...
