

CMIP6 Model Analysis Workshop

The workshop focus will be on:

- Single and multi-model CMIP6 analyses and evaluation that take advantage of the large suite of CMIP6 experiments
- Efforts to connect model development and analysis to identify Earth system model improvements that help reduce systematic biases and/or increase the realism of models
- Methods for multi-model analysis
- Climate change impacts

The workshop will be structured around the three scientific questions:

1. How does the Earth system respond to forcing?
2. What are the origins and consequences of systematic model biases?
3. How can we assess future climate change given climate variability, predictability and uncertainty in scenarios.
