**Objectives**

The course will make the attendants familiar with simulation technologies used in Life Sciences and their specific adaptation to HPC environment

**Detailed outline:**
Introduction to biomolecular simulation  
Coarse-grained and atomistic simulation strategies  
Automated setup for simulation

**HPC specifics:** Large scale parallelization, use of GPU’s  
Storage and strategies for large scale trajectory analysis

**Learning Outcomes:** Setup, execute, and analyze standard simulations in HPC environment

**Requirements**

**Prerequisites:** Basic knowledge of structural bioinformatics Basic knowledge of parallelization strategies.  
Material will be provided during the course, students are welcome to provide their own use cases.

**Course Convener:**

Josep Gelpi
