The Innovation Journey is a training program in technology transfer thought and designed for BSC and X4HPC researchers willing to unleash their inner entrepreneur and acquire the tools to bring their technologies into the market.

Welcome on board of the Innovation Journey!

In this adventurous trip, one can surf the waves of the process of bringing ideas from research centres to the private sphere and vice versa. Thus, we propose a journey across the phases of development of a technology-transfer project: through a travel guide in the format of several workshops.

In the first editions, we had the chance to gather 20 brilliant and passionate researchers to enjoy exchanging ideas and learning through interactive seminars and workshops by established experts and successful entrepreneurs’ real journeys. In addition, in this sense, since we know you love data, let us bring in some:

- 6/11 BSC-CNS spin-offs have been created in the past three years.
- 4 BSC-CNS spin-offs have been constituted after participating in the last editions of the Innovation Journey.
The transfer of technology developed inside the research centres to society and the private sector is becoming a reality. It allows scientists to develop and exploit their discoveries in a more independent and challenging, but also fruitful way. Moreover, it allows the private market to benefit from technological solutions being developed in the public sector.

Together, we will create a space of ideas, projections and solutions from which everyone will develop a joint mind-set that unites research and the private market.

Are you a researcher with an idea?

This programme is tailored for you!

**Deadline: 11th June, 2023, 23:59 (GMT+2)**
