Resume

Octavio Castillo Reyes (*Xalapa, Veracruz, Mexico, 1985*) holds a Ph.D. in Computer Architecture (*2017*) from the Polytechnic University of Catalonia (UPC, Barcelona, Spain), a Master's degree in Networks and Telecommunications (*2011*) from Atenas Veracruzana University (UAV, Xalapa, Veracruz, Mexico), and a Bachelor's degree in Computer Systems Engineering (*2007*) with a specialization in open systems from the Technological Institute of Xalapa (ITSX, Xalapa, Veracruz, Mexico).

From *2007-2008*, he was involved in coordinating the Web portal of the University Veracruzana's (UV, Xalapa, Veracruz, Mexico) Program for Reader Training. Between *2010* and *2013*, he became a Collaborator in the Academic Body "Information Technologies and Intelligent Organizations in the Knowledge Society" at UV. During the period *2008-2011*, he served as a Coordinator for Information Analysis and Integration in Information Systems and Portals at UV's General Directorate of Information Technologies. From *2010-2013*, he engaged in teaching activities in the Administrative Computer Systems program at the Faculty of Accounting and Administration at UV. Between *2011* and *2013*, he participated as a collaborator in the basic academic core of the Telematics Master's program at UV, where he was involved in teaching and operational coordination.

He has delivered national and international conferences (Cuba, Peru, Argentina, Spain, France, Germany, Ireland, Canada, Czech Republic, Greece, South Korea, United States, Switzerland, United Kingdom). His research work revolves around mathematical methods and models for evaluating the performance of sensor networks (WSN), numerical simulations, parallel algorithms, finite elements, *High-performance Computing (HPC)*, and their application in exploration geophysics. In *2015*, he won the JCC2015-BSC award in the "Your Thesis in Three Minutes" competition during the 2nd CONACyT - Catalonia Cooperation Symposium. He was a CONACyT fellowship (*2013-2017*) for his studies in Computer Architecture at UPC. His research was conducted at the Computer Applications in Science and Engineering (CASE) department of the Barcelona Supercomputing Center (BSC, Barcelona, Spain), under the guidance of Professor José María Cela Espín and researcher Josep de la Puente of the REPSOL-BSC research group. His doctoral thesis, supported and framed by the European Project "Geophysical Exploration using Advanced Galerkin Methods" (GEAGAM), focused on the vector finite element method for solving electromagnetic problems in exploration geophysics and its integration into HPC architectures.

He served as a postdoctoral researcher in the CASE department at BSC (*2018-2023*) and as part-time professor in the Department of Computer Architecture (DAC) at UPC (*2018-2023*).
